Documentation for IBM watsonx as a Service

Last updated: Nov 27, 2024

IBM watsonx as a Service is where you work with, deploy, and govern foundation and machine learning models with watsonx.ai and watsonx.governance.

To sign up or try a demo of watsonx.ai, go to the watsonx.ai product page. If you are looking for watsonx.data, see IBM watsonx.data documentation.

Developer Hub →	Foundation models →	AI agents →
What's new	Quick start tutorials	AI risk atlas

Now click on Gen AI solutions

Ways to work

You can write code for your generative AI solution. For a list of tasks and APIs, see Coding generative AI solutions.

You can work in a no-code or low-code experience with tools in the UI:

- Prompt Lab
- Agent Lab
- AutoAI for RAG
- Tuning Studio
- Vector indexes
- Evaluation Studio

Foundation model architecture

Foundation models are large AI models that have billions of parameters and are trained on terabytes of data. Foundation models can do various tasks, including text, code, or image generation, classification, conversation, and more. Large language models are a subset of foundation models that can do tasks that are related to text and code.

Foundation models represent a fundamentally different model architecture and purpose for AI systems. The following diagram illustrates the difference between traditional machine learning AI models and foundation models for generative AI.

Traditional AI models | Foundation models

Creating and running a prompt

To create and run a new prompt, complete the following steps:

1. From the watsonx.ai home page, choose a project, and then click the **New asset > Chat and build prompts with foundation models** tile.
2. ***Optional***: Choose a different edit mode to work in, such as ***Freeform***.
3. Select a foundation model.

> **Tip:** To see all of the available foundation models, remove any search filters that are applied.

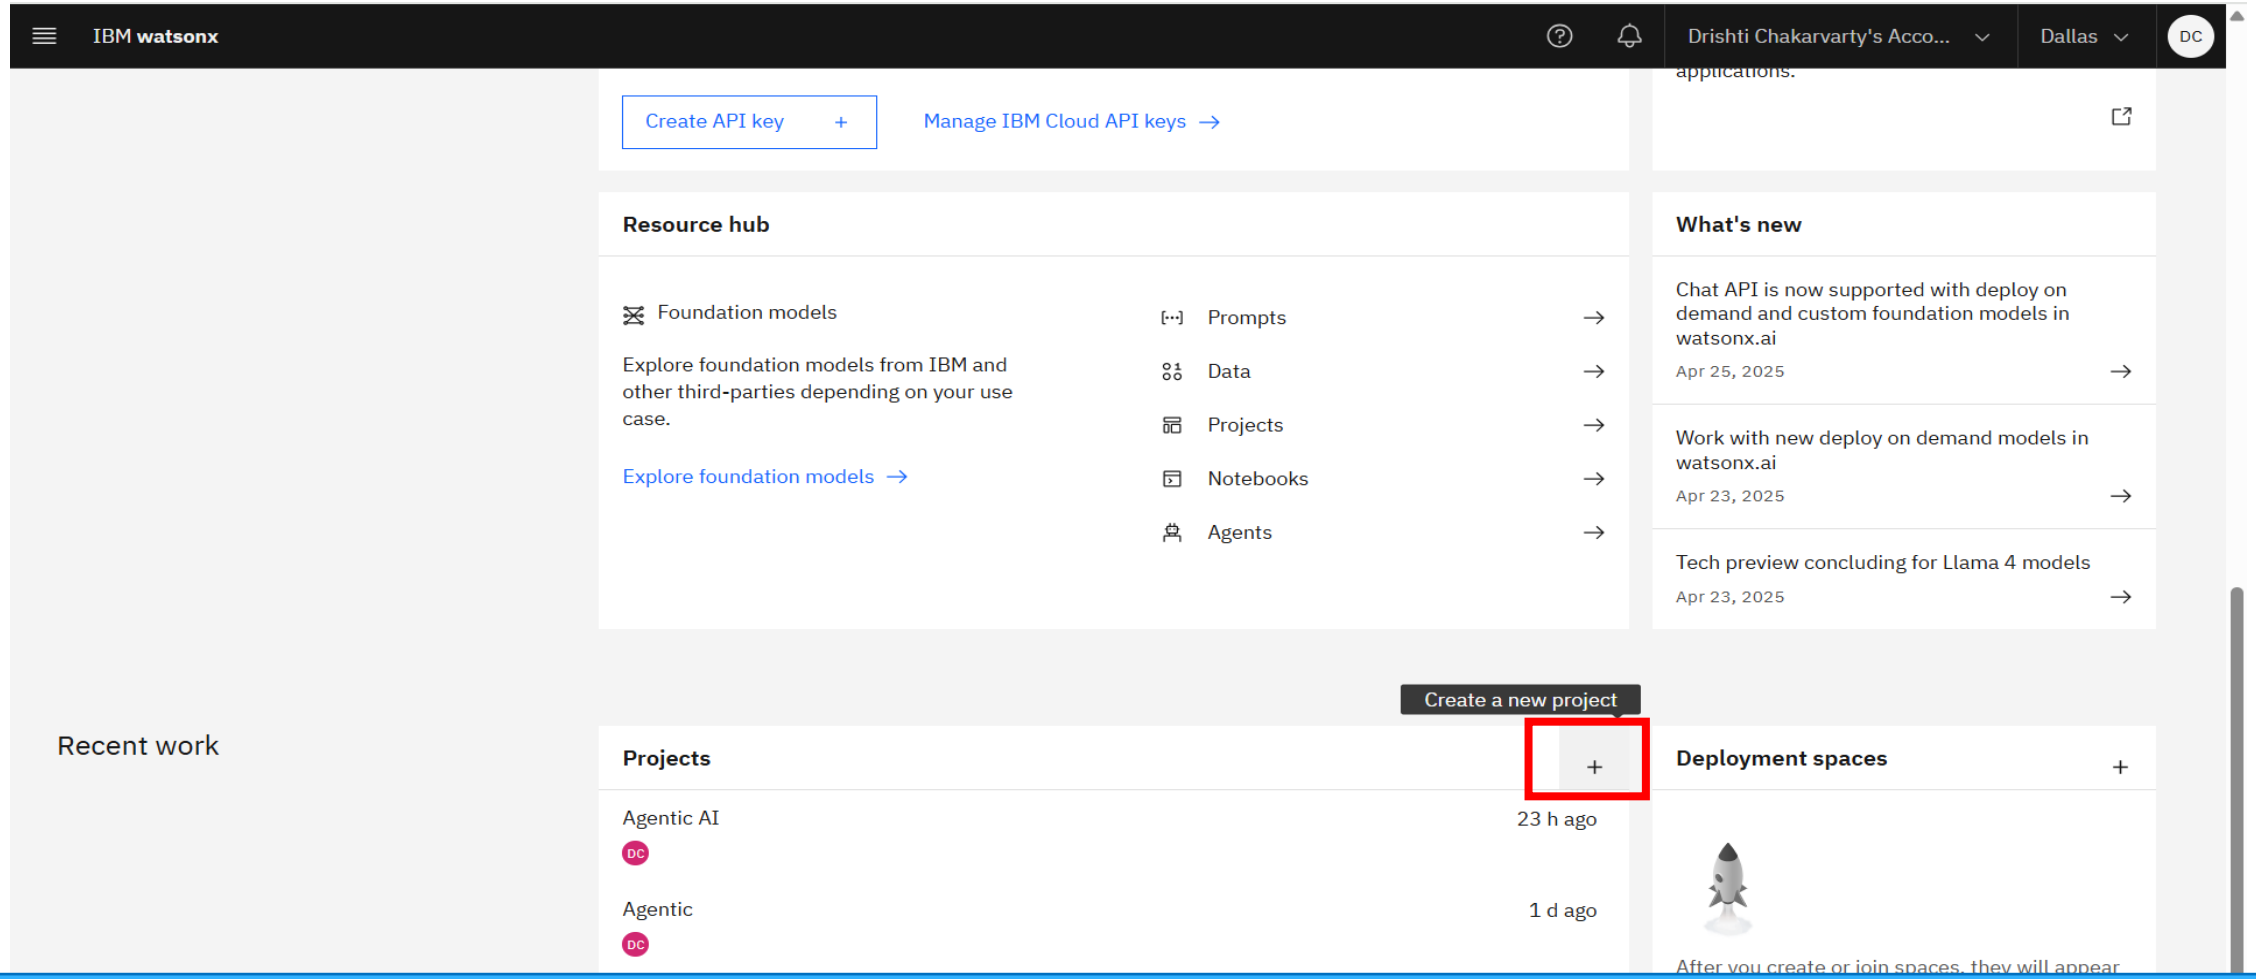
4. ***Optional***: Update model parameters or add prompt variables.
5. Enter a prompt.
6. Click the **Send** icon.

   In ***Structured*** or ***Freeform*** mode, click **Generate**.
7. You can cancel an inference request at any time by clicking the **Stop** icon.

   Tokens in your input are counted as tokens used. Any tokens that were generated by the model as output before the request was canceled are

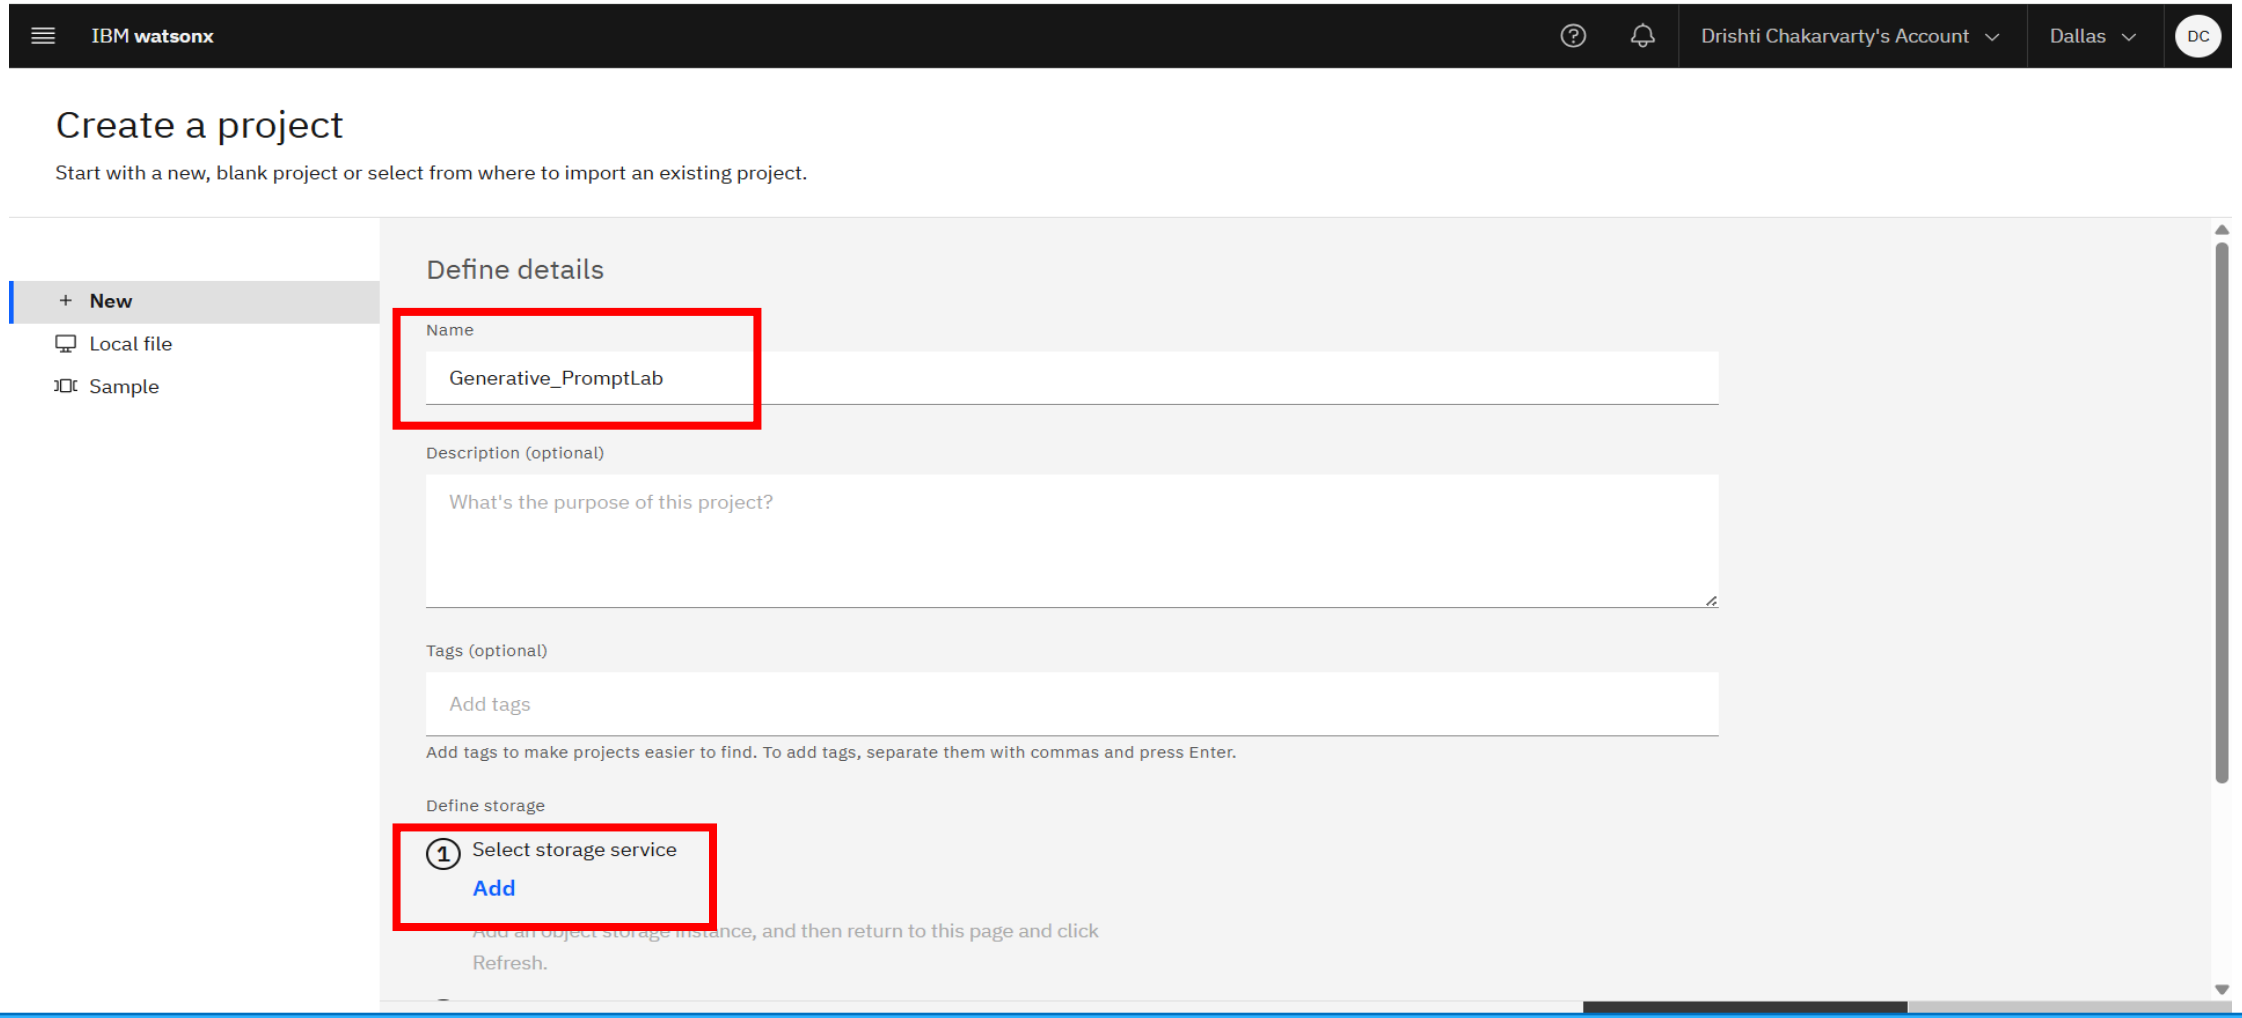
Now click on watsonx.ai home page

Step by step process of prompt lab



Click on Create a new project

Step by step process of prompt lab



Now Enter the Project name & then click on Add

Step by step process of prompt lab

Pricing plan

Displayed prices do not include tax. Monthly prices shown are for country or region: United States

Plan	Features	Pricing
One Rate	**One Rate plan offers a flat monthly charge that includes capacity, and built-in allowances for outbound bandwidth and data access. It is best suited for active workloads with large amounts of outbound bandwidth as a percent of their storage capacity.**	
Lite(deprecated)	**Lite plan instance is free to use for Storage capacity up to 25 GB per month. Lite plan instance is used for trial, and can be easily upgraded to Standard plan for unlimited scalability and full functionality.** None **Lite plan services are deleted after 30 days of inactivity.**	Free
Standard	**Standard plan is our most popular Pay-as-You-Go option with no minimum fee, ideal for most enterprise workloads. It includes a Free Tier with 5GB of free storage for 12 months. To access the Free Tier, choose Smart Tier for your bucket storage class. The Free Tier has no cost; you pay only if your usage is beyond the free tier allowance.**	

Summary

Cloud Object Storage

Region: Global
Plan: Lite(deprecated)
Service name: Cloud Object Storage-lb
Resource group: Default

Step by step process of prompt lab

Now click on Chat and build prompts with foundation models

You’ll get a response in three modes

💬 **Chat**
Talk to the model like a chatbot. Great for Q&A, conversation flow testing, and interactive responses. Useful for exploring how the model handles real-world dialog.

🧩 **Structured**
Fill in a form with specific inputs (like text + task type).
Perfect for beginners and repeatable tasks like summarizing, classifying, or translating content.

✍️ **Freeform**
Type your prompt exactly how you want — no restrictions or templates.
Ideal for creative writing, brainstorming, or testing custom instructions.

Projects / Generative_PromptLab / Prompt Lab | Unsaved | New prompt + | AI guardrails on

Chat | Structured | Freeform | Model: granite-3-8b-instruct

Tell the model what to do. For example: Summarize the transcript.

Examples (optional)

Input:	Output:
Enter your example input here.	Enter your desired output.

Add example +

Try

Test your prompt

Input:	Output:
What is Python?	Python is a high-level, interpreted programming language known for its readability and simplicity. It was created by Guido van Rossum and first released in 1991. Python supports multiple programming paradigms, including procedural, object-oriented, and functional programming. It is widely used for various applications, such as web development, data analysis, machine learning, artificial intelligence, and scientific computing. Python's extensive standard library and vast ecosystem of third-party packages make it a popular choice for both beginners and experienced developers.

New test +

Stop reason: End of sequence token encountered
Tokens: 10 input + 114 generated = 124 out of 131072
Time: 1.8 seconds
